MOLECULE	INDICATION	Phase	No. of Sites	No. of Patients
Paclitaxel	Metastatic Breast Cancer	III	9	60
Capecitabine	Metastatic Breast Cancer	III	11	54
Doxorubicin Hydrochloride Liposome Injection	Ovarian Cancer	III	10	72
Enzalutamide	Prostate cancer	IV	10	50
Everolimus	Advanced renal cell carcinoma	I	15	42
Firmagon	Prostate cancer	IV	19	230
Imatinib Mesylate	Chronic Myeloid Leukemia	III	5	36
Nitazoxanide	Breast cancer	IV	19	336

# Advancements in Cancer Treatment - Ongoing Clinical Trials

## CANCER

## Conclusion

The ongoing clinical trials in cancer treatment underscore the continuous efforts to advance therapeutic options for patients facing various forms of cancer. From metastatic breast cancer to chronic myeloid leukemia, these trials represent a collective commitment to improving outcomes, exploring novel treatments, and addressing the complexities associated with different types of cancer. The outcomes of these trials have the potential to shape the future of cancer care and provide hope for individuals affected by these challenging diseases.
