NAFTIFINE IN THE BATTLE AGAINST SUPERFICIAL FUNGAL INFECTIONS

CLINICAL TRIALS FRONTIER

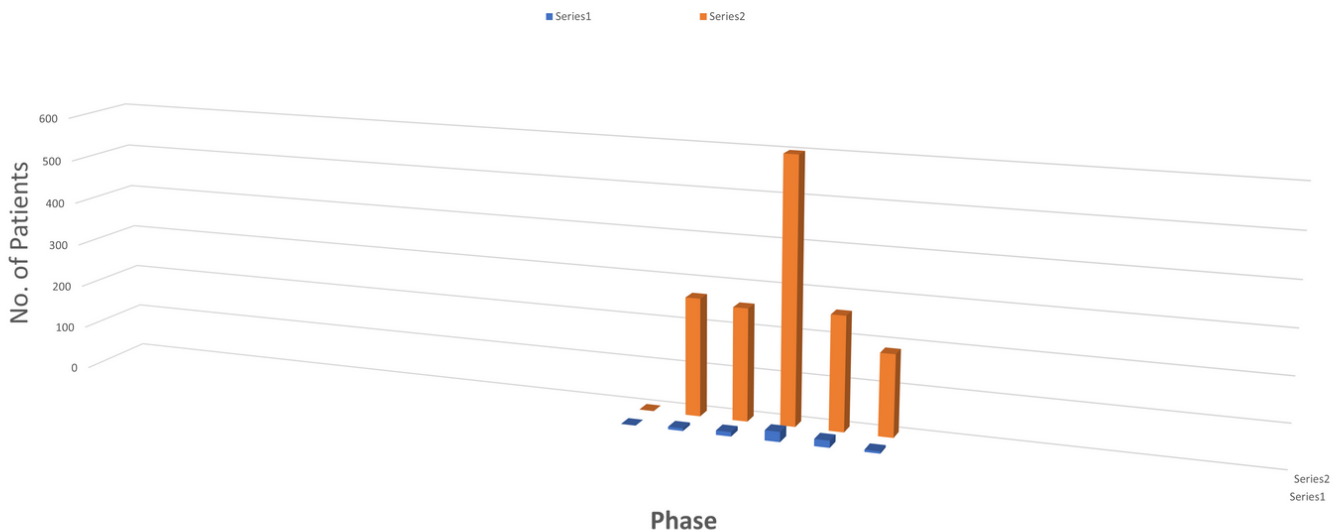

Dermatology And Orthopaedics

MOLECULE	INDICATION	Phase	No. of Sites	No. of Patients
Naftifine	Superficial Fungal Infection	III	6	268
Minocycline	Moderate to severe acne vulgaris	IV	10	256
Clindamycin Phosphate and Benzoyl Peroxide Gel	Acne Vulgaris	III	23	600
Iguratimod	Active Rheumatoid Arthritis	III	16	260
Aceclofenac Topical Ointment with Voveran Emulgel (Diclofenac Sodium)	Osteoarthritis	III	5	186

Progress in Dermatology and Orthopaedics - Ongoing Clinical Trials

Dermatology And Orthopaedics

Conclusion

The concurrent progress in dermatology and orthopaedics is marked by a series of promising clinical trials. From Naftifine's potential against fungal infections to Minocycline's application in severe acne, and the targeted approach of Clindamycin Phosphate and Benzoyl Peroxide Gel for acne vulgaris, these trials signify a commitment to advancing dermatological care.

Simultaneously, the exploration of Igaratimod for rheumatoid arthritis and the combination therapy for osteoarthritis present promising developments in the field of orthopaedics. These trials collectively contribute to expanding the therapeutic options and improving the quality of life for individuals dealing with a range of dermatological and orthopaedic conditions.
